## Contents

<b>1</b>	<b>Introduction to Empirical Data Analysis</b> . . . . .	1
1.1	Multivariate Data Analysis: Overview and Basics . . . . .	2
1.1.1	Empirical Studies and Quantitative Data Analysis . . . . .	4
1.1.2	Types of Data and Special Types of Variables . . . . .	5
1.1.3	Classification of Methods of Multivariate Analysis . . . . .	10
1.2	Basic Statistical Concepts . . . . .	14
1.2.1	Basic Statistical Measures . . . . .	15
1.2.2	Covariance and Correlation . . . . .	21
1.3	Statistical Testing and Interval Estimation . . . . .	26
1.3.1	Conducting a Test for the Mean . . . . .	26
1.3.2	Conducting a Test for a Proportion . . . . .	36
1.3.3	Interval Estimation (Confidence Interval) . . . . .	39
1.4	Causality . . . . .	40
1.4.1	Causality and Correlation . . . . .	41
1.4.2	Testing for Causality . . . . .	42
1.5	Outliers and Missing Values . . . . .	44
1.5.1	Outliers . . . . .	44
1.5.2	Missing Values . . . . .	48
1.6	How to Use IBM SPSS, Excel, and R . . . . .	52
<b>2</b>	<b>Regression Analysis</b> . . . . .	55
2.1	Problem . . . . .	55
2.2	Procedure . . . . .	59
2.2.1	Model Formulation . . . . .	61
2.2.2	Estimating the Regression Function . . . . .	65
2.2.3	Checking the Regression Function . . . . .	76
2.2.4	Checking the Regression Coefficients . . . . .	86
2.2.5	Checking the Underlying Assumptions . . . . .	91

2.3	Case Study . . . . .	124
2.3.1	Problem Definition . . . . .	124
2.3.2	Conducting a Regression Analysis With SPSS . . . . .	125
2.3.3	Results . . . . .	128
2.3.4	SPSS Commands . . . . .	137
2.4	Modifications and Extensions . . . . .	138
2.4.1	Regression With Dummy Variables . . . . .	138
2.4.2	Regression Analysis With Time-Series Data . . . . .	140
2.4.3	Multivariate Regression Analysis . . . . .	146
2.5	Recommendations . . . . .	146
<b>3</b>	<b>Analysis of Variance . . . . .</b>	<b>157</b>
3.1	Problem . . . . .	158
3.2	Procedure . . . . .	160
3.2.1	One-way ANOVA . . . . .	161
3.2.2	Two-way ANOVA . . . . .	177
3.3	Case Study . . . . .	191
3.3.1	Problem Definition . . . . .	191
3.3.2	Conducting a Two-way ANOVA with SPSS . . . . .	192
3.3.3	Results . . . . .	192
3.3.4	SPSS Commands . . . . .	203
3.4	Modifications and Extensions . . . . .	205
3.4.1	Extensions of ANOVA . . . . .	205
3.4.2	Covariance Analysis (ANCOVA) . . . . .	207
3.4.3	Checking Variance Homogeneity Using the Levene Test . . . . .	210
3.5	Recommendations . . . . .	213
<b>4</b>	<b>Discriminant Analysis . . . . .</b>	<b>217</b>
4.1	Problem . . . . .	218
4.2	Procedure . . . . .	219
4.2.1	Definition of Groups and Specification of the Discrimination Function . . . . .	221
4.2.2	Estimation of the Discriminant Function . . . . .	222
4.2.3	Assessment of the Discriminant Function . . . . .	233
4.2.4	Testing the Describing Variables . . . . .	239
4.2.5	Classification of New Observations . . . . .	242
4.2.6	Checking the Assumptions of Discriminant Analysis . . . . .	250
4.3	Case Study . . . . .	251
4.3.1	Problem Definition . . . . .	251
4.3.2	Conducting a Discriminant Analysis with SPSS . . . . .	253
4.3.3	Results . . . . .	257
4.3.4	SPSS Commands . . . . .	278
4.4	Recommendations . . . . .	278

---

<b>5</b>	<b>Logistic Regression</b> . . . . .	269
5.1	Problem . . . . .	269
5.2	Procedure . . . . .	275
5.2.1	Model Formulation . . . . .	276
5.2.2	Estimation of the Logistic Regression Function . . . . .	293
5.2.3	Interpretation of the Regression Coefficients . . . . .	296
5.2.4	Checking the Overall Model . . . . .	303
5.2.5	Checking the Estimated Coefficients . . . . .	313
5.2.6	Conducting a Binary Logistic Regression with SPSS . . . . .	315
5.3	Multinomial Logistic Regression . . . . .	320
5.3.1	The Multinomial Logistic Model . . . . .	322
5.3.2	Example and Interpretation . . . . .	323
5.3.3	The Baseline Logit Model . . . . .	326
5.3.4	Measures of Goodness-of-Fit . . . . .	328
5.4	Case Study . . . . .	335
5.4.1	Problem Definition . . . . .	335
5.4.2	Conducting a Multinomial Logistic Regression with SPSS . . . . .	336
5.4.3	Results . . . . .	341
5.4.4	SPSS Commands . . . . .	351
5.5	Modifications and Extensions . . . . .	351
5.6	Recommendations . . . . .	355
<b>6</b>	<b>Contingency Analysis</b> . . . . .	375
6.1	Problem . . . . .	375
6.2	Procedure . . . . .	376
6.2.1	Creating a Cross Table . . . . .	376
6.2.2	Interpretation of Cross Tables . . . . .	379
6.2.3	Testing for Associations . . . . .	380
6.3	Case Study . . . . .	388
6.3.1	Problem Definition . . . . .	388
6.3.2	Conducting a Contingency Analysis with SPSS . . . . .	388
6.3.3	Results . . . . .	390
6.3.4	SPSS Commands . . . . .	392
6.4	Recommendations and Relations to Other Multivariate Methods . . . . .	394
6.4.1	Recommendations on How to Implement Contingency Analysis . . . . .	394
6.4.2	Relation of Contingency Analysis to Other Multivariate Methods . . . . .	395
<b>7</b>	<b>Factor Analysis</b> . . . . .	405
7.1	Problem . . . . .	406
7.2	Procedure . . . . .	409
7.2.1	Evaluating the Suitability of Data . . . . .	410

7.2.2	Extracting the Factors and Determining Their Number . . . . .	417
7.2.3	Interpreting the Factors . . . . .	442
7.2.4	Determining the Factor Scores . . . . .	444
7.2.5	Summary: The Essence of Factor Analysis . . . . .	447
7.3	Case Study . . . . .	449
7.3.1	Problem Definition . . . . .	449
7.3.2	Conducting a Factor Analysis with SPSS . . . . .	450
7.3.3	Results . . . . .	455
7.3.4	SPSS Commands . . . . .	472
7.4	Extension: Confirmatory Factor Analysis (CFA) . . . . .	473
7.5	Recommendations . . . . .	477
<b>8</b>	<b>Cluster Analysis</b> . . . . .	<b>481</b>
8.1	Problem . . . . .	481
8.2	Procedure . . . . .	483
8.2.1	Selection of Cluster Variables . . . . .	484
8.2.2	Determination of Similarities or Distances . . . . .	487
8.2.3	Selection of the Clustering Method . . . . .	496
8.2.4	Determination of the Number of Clusters . . . . .	511
8.2.5	Interpretation of a Clustering Solution . . . . .	519
8.2.6	Recommendations for Hierarchical Agglomerative Cluster Analyses . . . . .	521
8.3	Case Study . . . . .	521
8.3.1	Problem Definition . . . . .	521
8.3.2	Conducting a Cluster Analysis with SPSS . . . . .	523
8.3.3	Results . . . . .	526
8.3.4	SPSS Commands . . . . .	535
8.4	Modifications and Extensions . . . . .	536
8.4.1	Proximity Measures for Non-metric Data . . . . .	538
8.4.2	Partitioning Clustering Methods . . . . .	550
8.5	Recommendations . . . . .	556
<b>9</b>	<b>Conjoint Analysis</b> . . . . .	<b>539</b>
9.1	Problem . . . . .	539
9.2	Procedure . . . . .	542
9.2.1	Selection of Attributes and Attribute Levels . . . . .	543
9.2.2	Design of the Experimental Study . . . . .	545
9.2.3	Evaluation of the Stimuli . . . . .	550
9.2.4	Estimation of the Utility Function . . . . .	553
9.2.5	Interpretation of the Utility Parameters . . . . .	562
9.3	Case Study . . . . .	568
9.3.1	Problem Definition . . . . .	568
9.3.2	Conducting a Conjoint Analysis with SPSS . . . . .	568

---

9.3.3	Results . . . . .	576
9.3.4	SPSS Commands . . . . .	583
9.4	Choice-Based Conjoint Analysis . . . . .	584
9.4.1	Selection of Attributes and Attribute Levels . . . . .	586
9.4.2	Design of the Experimental Study . . . . .	587
9.4.3	Evaluation of the Stimuli . . . . .	590
9.4.4	Estimation of the Utility Function . . . . .	590
9.4.5	Interpretation of the Utility Parameters . . . . .	601
9.5	Recommendations . . . . .	602
9.5.1	Recommendations for Conducting a (Traditional) Conjoint Analysis . . . . .	602
9.5.2	Alternatives to Conjoint Analysis . . . . .	603
<b>Index</b>	. . . . .	<b>607</b>
